

TEMPERO

Business Plan

Data-driven planning and insight platform

Nova SBE Canteen Pilot

May 2026

1. Executive Summary

Tempero is a data-driven planning and insight platform from WeAreData, a UK-based company led by CEO Davide Calvi. It helps teams create value by blending student attendance data, operational insights, and the TIAGO Meta Framework into practical decisions.

Objectives:

- Launch the Tempero MVP and complete a Nova SBE canteen pilot.
- Validate the concept with attendance and service usage data.
- Demonstrate the value of data-driven planning for campus hospitality.
- Use pilot results to shape a broader market offering.

Time horizon: 12 months, divided into 4 periods of 3 months each.

2. Business Description

Tempero is a warm, human-focused platform that uses data like a good recipe: thoughtfully combined, easy to follow, and built for practical results.

Mission:

Help teams turn data into decisions that feel smart, simple, and meaningful.

Value proposition:

- Combine attendance and operational data with innovation frameworks.
- Blend smoothly with existing hospitality and canteen systems rather than replacing them.
- Provide clear recommendations for improving service, supply planning, and operations.
- Support teams in delivering measurable value without unnecessary complexity.

3. Market Analysis

Target customers:

- Educational institutions managing dining and attendance.
- Hospitality and canteen operators.
- Innovation teams in service businesses.
- Consultants and advisors focused on operational value.

Customer needs:

- Better understanding of attendance patterns and demand.
- Practical tools for planning student-facing operations.
- Support for existing hospitality workflows and operational systems.
- Ability to digitize manual documents, such as invoices, and bring that data into one dashboard.

Pilot context:

The product will be run and tested by Susanna, who manages the Nova SBE canteen operated by Eurest. The pilot is built as a half-semester test (approximately 2 months) to capture student attendance and canteen usage data. The pilot will also test document scanning and parsing of manual invoices so the canteen can move paper processes into the dashboard.

Competitive edge:

- Combines Portuguese warmth with UK-based execution.
- Built around the TIAGO Meta Framework and Professor Luis Filipe Lages's guidance.
- Feels softer and more human than typical enterprise data tools.

4. Product / Service Offering

Core product:

- Value creation wheel dashboard.
- Insight pages for trends, ideas, and recommendations.
- Planner and roadmap pages for implementation.
- Document scanning and parsing for manual invoices and other paper records.
- Integration with existing hospitality and canteen systems to blend new insights with current operations.

Premium service offerings:

- Custom reporting and dashboards.
- Team collaboration features.
- Data integration and onboarding consultancy.
- Support for adding paper-based financial and inventory data into the digital workflow.

5. Business Model

Revenue streams:

- Subscription revenue from platform access at 39.99€ per user per month.
- One-time onboarding and consulting fees.
- Future premium add-ons and reporting planned for Year 2.

Pricing assumptions:

- Pilot pricing is 39.99€ per user per month.
- Year 1 will be intentionally low-volume as the product proves fit.
- Premium services are reserved for Year 2 once core adoption is established.

6. Team and Operations Plan

Leadership:

Davide Calvi — CEO, WeAreData

Core team:

- Paddy Rush — full stack development & strategy.
- Laura Christin Karstädt — marketing.
- Vittoria Niero — entrepreneurship.
- Letizia Pomatto — entrepreneurship.
- Giovanni Bindi — operations.

Pilot oversight:

Susanna will run the Nova SBE canteen pilot as part of the Eurest-operated service.

Advisory:

Professor Luis Filipe Lages provides academic direction through the TIAGO Meta Framework.

Development priorities:

- Prioritize MVP flows that connect attendance data, student demand, and operational recommendations.
- Build the interfaces and reporting needed for the canteen pilot.
- Add the ability to scan and parse manual documents like invoices.
- Ensure the product works alongside existing point-of-sale and inventory systems.

7. Funding Opportunity

Tempero will seek EU grant support to accelerate pilot delivery and product development. The most relevant funding avenue is **Horizon Europe**, especially SME-oriented calls under the Digital, Industry and Space cluster.

Potential grant use:

- Support the Nova SBE pilot and canteen integration.
- Fund document scanning and invoice parsing development.
- Cover early adoption and reporting work with Eurest and academic advisors.
